In the model 400 CN traffic speeds are limited to 25 or 40/50 kilometres per hour. In addition to the normal capacity, the recirculation of the body system increases time on the job at more than 50%. In this section, in recent years various companies have chosen to develop models to simplify and improve the daily work of these teams. This machine is noted for its high scanning performance, low emissions and low cost of maintenance, something more and more appreciated by municipal departments. In addition, the width of only 1,650 mm and a reduced wheelbase allow you easy access steps and very narrow, ideal tracks for old helmets. The configuration of the mechanism's sweep of two front adjustable brushes, of 1,000 millimeters in diameter, is also designed to achieve the effective cleaning of alleys and corners of 90 Ã°Ã.Both CX 400 as the 400 CN version sweep at speeds up to 16 kilometers per hour. In the first case, it is capable of reaching speeds of 80 km per hour transit optimize the time in the workplace. It also diminishes the weight of the brush during the work of light brushing to prolong the useful life of the brush.With simultaneous scanning machines Scan Dual display simultaneously the two side brushes and mouths of aspiration on both sides, to achieve a maximum width of swath of 3.6 m.The napkins of electric rear mesh filters provide a quick and effective method to eliminate paper, leaves and dirt from the meshes of suction without opening the doors of access or the rear.In the sweepers V Range, the option of water recycling significantly increases the productivity of the scan. With a corrosion-resistant stainless steel hopper, the V range has a rugged construction of great strength. The simplicity of its design allows long intervals between maintenance services, which translates to 50% less for services during the life of the Sweeper in comparison with other machines in its class.It also emphasizes by its engine, Deutz low emission diesel³ n, a valuable factor on the part of environmental officials. The CN101 sweeper emphasizes its higher scanning performance, low emission³ and low maintenance cost. Presenting the operator's comfort, but Johnston also thinks of the operator when he designs a sweeper. It can also be equipped with a lightweight suction ³ or 'littasnatch', specially designed to collect the lighter pavements and hedges of garbage. However, it is a highly versatile machine, low emissions and high succiÃ ³ n power, which makes it as good for urban centers as industrial areas. This is the case of Johnston, marked British specialist sweeper for the urban cleaning Geesink sold in EspaÃ±a. Its catalog includes a series of models for different needs, whether in narrow streets, with water recycling, sweeping and aspiration or ³ scrubbing, among others, to come complete the offer of Geesink in terms of collection ³ and recovery ³ waste. One option is the compact sweeper CN101, a ³ meter of capacity, a 5xUseful and manageable for urban and pedestrian areas where space is limited. Geesinknorba EspaÃ±a, S.L.U. S.L.U.
